Bootstrap Datepicker Disable Past Dates Example - nicesnippets.com

We have already discussed how to use Material UI framework in Angular project and how to use Datepicker component in a view. This Angular post is compatible with Angular 4 upto latest versions, Angular 7, Angular 8, Angular 9, Angular 10, Angular 11, Angular 12 and Angular 13. But sometimes we may need to show Datepicker inline in a view so that it will be always visible to the user for selections. In this tutorial, we will go through steps to demonstrate how to use Calendar inline in component with available options like: Set Max Date Set Min Date Filter some of the dates; Disable Sundays and Saturdays in Inline MatCalendar Start At property Event trigger control on date selected. First, let's go through steps to create a new Angular project and install Angular Material. You can jump to Calendar implementation here. Create a new Angular Project As now we have NG CLI tool install, we can easily create a new Angular project by running following command in CLI \$ ng new HeyAngularMaterial After running above command it will ask if you want Routing in the project? and also about CSS style formats you want to opt for the project. Install Angular Material To install Angular Material in Angular project run following npm CLI command to install Material, CDK and Animation packages. \$ npm install --save @angular/material @angular/cdk @angular/animations Enable Animation for Material Components Animations like smooth scrolling effect, ripple effect on button click need to be enabled or disabled by importing following modules. In the app.module.ts file make the following changes: Enable Animations: import {BrowserAnimationsModule} from '@angular/platform-browser/animations'; @NgModule({ ... imports: [BrowserAnimationsModule], ... }) Disable Animations: import {NoopAnimationsModule} from '@angular/platform-browser/animations'; @NgModule({ ... imports: [NoopAnimationsModule], ... }) Add Material Theme Components used in the project are styles using CSS available in the material CSS theme file, so just add the following theme link in styles.css available at the project root. @import "email protected/material/prebuilt-themes/deeppurple-amber.css"; /* @import "email protected/material/prebuilt-themes/indigo-pink.css"; */ /* @import "email protected/material/prebuilt-themes/pink-bluegrey.css"; */ /* @import "email protected/material/prebuilt-themes/purple-green.css"; */ you can use any one of these available themes. That's it... we are done with Angular material configuration. Add Inline Material Datepicker Calendar For using an Angular Material UI component, we need to import its API in the app's main module. Here we will import the following modules: MatDatepickerModule and MatNativeDateModule are required modules to show inline datepicker. MatGridListModule(optional) here we used this module to use Grid structure and align out Datepicker better in view After importing these modules, the app.module.ts file will look like this: // app.module.ts import { BrowserModule } from '@angular/platform-browser'; import { NgModule } from '@angular/core'; import { AppRoutingModule } from './app-routing.module'; import { AppComponent } from './app.component'; import { BrowserAnimationsModule } from '@angular/platform-browser/animations'; import { MatDatepickerModule, MatNativeDateModule, MatGridListModule } from '@angular/material'; @NgModule({ declarations: [AppComponent], imports: [BrowserModule, AppRoutingModule, BrowserAnimationsModule, MatDatepickerModule, MatNativeDateModule, MatGridListModule], providers: [], bootstrap: [AppComponent] }) export class AppModule { } Now to show inline Datepicker Calendar we will use mat-calendar component with following option properties: Input Properties: selected: Set selected/ highlighted date in calendar datepicker. startAt: Date from which calendar view will start. minDate: Set Minimum date in calendar datepicker. maxDate: Set Maximum date in calendar datepicker. dateFilter: Filter method used to enable or disable dates. ie disable Saturdays and Sundays in the calendar view. Output Properties: selectedChange: Event-triggered when a date is selected by the user. In the app.component.html file place following code: {{DayAndDate}}, {{year}} In the app.component.ts file add following code with property bindings, filter, and method: // app.component.ts import { Component } from '@angular/core'; @Component({ selector: 'app-root', templateUrl: './app.component.html', styleUrls: ['./app.component.css'] }) export class AppComponent { title = 'ng-calendar-demo'; selectedDate = new Date('2019/09/26'); startAt = new Date('2019/09/11'); minDate = new Date('2019/09/14'); maxDate = new Date(new Date().setMonth(new Date().getMonth() + 1)); year = any; DayAndDate: string; constructor() { this.onSelect(this.selectedDate); } onSelect(event) { console.log(event); this.selectedDate = event; const dateString = event.toString(); const dateValue = dateString.split(' '); this.year = dateValue[3]; this.DayAndDate = dateValue[0] + ' ' + ' ' + dateValue[1] + ' ' + dateValue[2]; } myDateFilter = (d: Date): boolean => { const day = d.getDay(); // Prevent Saturday and Sunday from being selected. return day !== 0 & day !== 6; } } It will look like this: Related Posts Introduction to Angular Bootstrap Datepicker The bootstrap has many advanced components and classes to make application user friendly. The angular make reduces the size of code in a one-page format to make web application lightweight. The combination of angular and bootstrap for date picker is useful and easy for users and developers. The angular bootstrap datepicker is an advanced feature for picking the date in web applications. It is choosing the date, month, and year as per user's requirements. We can able to pick the date range from start to end dates. It allows choosing the local language in datepicker and change the color of the calendar. It is supported by the manual trigger of datepicker and position of datepicker. Syntax: The angular bootstrap datepicker used angular and bootstrap technology. The basic angular bootstrap datepicker syntax is below. Bootstrap Component.ts syntax is below: import { Component } from '@angular/core'; @Component({ selector: 'basic-demo-datepicker', templateUrl: './datepickerdemo.html' }) export class BasicDemoDatepickerComponent { title = 'datepickerApp'; } How does Bootstrap Datepicker works? Given below is the working: Step 1: Two methods to install bootstrap in angular Given below are the two methods to install bootstrap in angular: Method 1: This method is using NPM. The ngx-bootstrap installs through the npm. Code: npm install ngx-bootstrap --save The bootstrap CSS stylesheet adds to the HTML page. We can use bootstrap3 or bootstrap4 stylesheet. Method 2: This method is using Angular CLI. The

ngx-bootstrap dependencies add using Angular CLI. ng addngx-bootstrap The ngx-bootstrap component name The angular bootstrap component Step 2: Two methods to install CSS in angular Given below are the two methods to install CSS in angular: Method 1: The CDN bootstrap datepicker file load in HTML file. Component file (app.component.ts) Code: import { Component } from '@angular/core'; @Component({ selector: 'basic-demo-datepicker', templateUrl: './filename.html' }) export class BasicDemoDatepickerComponent { title = 'datepickerApp'; } Output: Example #2 The Basic Angular Bootstrap Daterangepicker example and output are below. Html file (filename.html) Code: Angular Bootstrap Datepicker tutorial Component file (app.component.ts) Code: import {Component} from '@angular/core'; @Component({ selector: ' inline-demo-datepicker', templateUrl: './filename.component.html ' }) export class InlineDemoDatepickerComponent { title = 'datepickerApp'; bsInlineValue = new Date(); bsInlineRangeValue = new Date(); constructor() { this.maxDate.setDate(this.maxDate.getDate() + 7); this.bsInlineRangeValue = [this.bsInlineValue, this.maxDate]; } } Output: Example #4 The date format set by angular bootstrap datepicker. Html file (filename. html) Code: Angular Bootstrap Datepicker tutorial {{ loc }} Date Picker Component file (app.component.ts) Code: import {Component} from '@angular/core'; import { BsLocaleService } from 'ngx-bootstrap/datepicker'; import { listLocales } from 'ngx-bootstrap/chronos'; @Component({ selector: ' basic-demo-datepicker', templateUrl: './filename.html ' }) export class BasicDemoDatepickerComponent { title = 'datepickerApp'; locale = 'hi'; locales = listLocales(); constructor(private localeService: BsLocaleService) { } applyLocale(pop: any) { this.localeService.use(this.locale); pop.hide(); pop.show(); } } Output: Conclusion The angular bootstrap datepicker reduces coding size and makes it easy for the coder. It is light weighed due to a one-page script application. It is advance, user friendly, and attractive web application component. This is a guide to Angular Bootstrap Datepicker. Here we discuss how does bootstrap datepicker works along with respective programming examples. You may also have a look at the following articles to learn more –

04/06/2022 · This Angular post is compatible with Angular 4 upto latest versions, Angular 7, Angular 8, Angular 9, Angular 10, Angular 11, Angular 12 and Angular 13. But sometimes we may need to show Datepicker inline in a view so that it will be always visible to the user for selections. 06/09/2020 · This post will give you simple example of bootstrap popover on angular. it's simple example of bootstrap popover for angular Follow bellow tutorial step of bootstrap popover html angular. Ng Bootstrap is developed from bootstrap and they provide all bootstrap 3 and bootstrap 4 native Angular directives like model, popover, tooltip, pagination ... 07/07/2020 · This page will walk through Angular Material Datepicker format example. Angular Material provides MAT_DATE_FORMATS object which is the collection of formats used by Datepicker to parse and display dates. To use custom date format we need to override MAT_DATE_FORMATS with given formats. The MAT_DATE_FORMATS is used by DateAdapter ... 23/07/2021 · Also, we can format the DatePicker as per the requirements. DatePicker provides various date formats like dd/mm/yyyy, yyyy-mm-dd, dd/mm/yyyy, dd-mm-yyyy, etc out of which one can be selected which best fits the requirements. To use this custom date formats we need to set this format in jQuery DatePicker. 24/01/2020 · Set custom date format of Datepicker. Get date value from Datepicker; Change date format. In this we are going to use only four(4) files. ... Implement Datepicker in Angular; ngx bootstrap for datepicker TRENDING UP 01. Using List Data Structures In Python©. 02. Why SharePoint Framework (SPFx) Is Best for SharePoint Development ... The combination of angular and bootstrap for date picker is useful and easy for users and developers. The angular bootstrap datepicker is an advanced feature for picking the date in web applications. It is choosing the date, month, and year as per user's requirements. input (Type: string, Example: 2004/Sep/4) - The input date to parse. format (Type: string, Example: yyyy/MMM/d) - The format we want to use. Check all the supported formats below. baseDate (Type: Date, Example: new Date()) - If you want to parse a date but maintain the timezone, you can pass an existing date here. return Introduction on Bootstrap Datepicker: The bootstrap has many advanced features and components. It makes more user-friendly applications. The bootstrap datepicker is an advanced feature of bootstrap for date picking in web applications. The datepicker is able to choose the date, month, and year as per the required date. Date Picker Bootstrap Date Picker. Note: This documentation is for an older version of Bootstrap (v.4). A newer version is available for Bootstrap 5. We recommend migrating to the latest version of our product - Material Design for Bootstrap 5. Go to docs v.5
